ABSTRACT

Statistics on brodcast and production hours of public television stations and licensees in the United States, Puerto Rico, and American Samoa for fiscal year 1971 are compiled. The major objective is to provide the public boadcasting community--including legislators, administrators, and researchers, as well as the communications industry as a whole--with essential quantitative information. Material is given for 193 stations owned and operated by 126 licensees and covers public television licensees and stations, total broadcast hours, weekly broadcast hours by day of week, broadcast hours by source of programing, and production hours. Six graphs, 33 summary tables, and 24 detailed tables are used to convey the information. Five appendixes deal with public television licensees, computations of broadcast hours, questionnaire items, public television stations which came on the air prior to or during 1971, and broadcast and production statistics for these new entries. Data were collected by the Corporation for Public Broadcasting by means of a survey questionnaire sent to station managers and directors of licensees. (Author/PB)

FOREWORD

This publication is part of a series of statistical reports on public broadcasting, based on data provided to the Corporation for Public Broadcasting (CPB) by public television and public radio licensees. The U. S. Office of Education's National Center for Educational Statistics (NCES) supported the data collection, analysis, and preparation of reports in the series. John Golden, Director of Planning, Research, and Evaluation at CPB, and Boyd Ladd, Assistant Director for Statistical Development in NCES, directed the efforts of the two agencies in this endeavor.

Statistics of broadcast and production hours of 126 public television licensees and 193 stations on the air cover the entire Fiscal Year 1971.

Publication of this information was made possible by the station managers and executive directors who took time from their very busy days to complete the questionnaires.

Henry Loomis
President, Corporation for
Public Broadcasting

INTRODUCTION

This report presents basic statistics on broadcast and production hours of public television stations and licensees in the United States, American Samoa, and Puerto Rico for Fiscal Year 1971. Its major objective is to provide the public broadcasting community--Federal and other legislators, administrators, and researchers, as well as the communications industry as a whole--with quantitative information on and summary analysis of the broadcast and production hours of public television.

The report consists of two major parts: hours broadcast by 193 stations on the air during the entire Fiscal Year 1971; and hours of programs produced by 126 licensees active throughout Fiscal Year 1971. The 193 stations were owned and operated by the 126 public television licensees. An additional 14 stations which began broadcasting after the beginning of Fiscal Year 1971 were not included in this analysis.

The data contained in this report were collected in the 1971 annual survey of public television licensees between October 1971 and April 1972 by the Corporation for Public Broadcasting, a nonprofit corporation established by the Public Broadcasting Act of 1967. In most cases, station general managers or executive directors of the licensees were the respondents to the survey.

Summary and detailed tables of broadcast and production hours are presented at the end of the narrative section of this report.

Appendixes cover (a) surveys of public television licensees, (b) computations of broadcast hours, (c) questionnaire items, (d) a list of public television stations on the air during entire Fiscal Year 1971 and a list of public television stations which came on the air during Fiscal Year 1971, and (e) broadcast hours of the 13 public television stations which began broadcasting during Fiscal Year 1971 and production hours of the 7 public television licensees which came on the air during Fiscal Year 1971.

The data on broadcast hours in this report are derived from station estimates of mean daily and weekly broadcast hours for the periods when local schools are in session and not in session. Figures thus derived cannot be considered as exact. For information on methods of data computation, see appendix B.

Data on broadcast hours were calculated and examined by total broadcast hours, number of broadcast weeks, type of programming, day of week, and source of programming. For data on production hours, hours of programs locally produced were tabulated by type of programming as well as by type of production.

ANALYSIS DESIGN

In order to show the varying characteristics of broadcast and production status, data were, in most cases, presented and analyzed by three major variables: type of licensee, geographic region, and adjusted budget size.1/ The three variables had a significant effect on the characteristics of broadcast and production hours of the public television stations and licensees.

Four major types of licensees produced programs during Fiscal Year 1971:

COMMUNITY ORGANIZATIONS--independently created corporations and foundations independent of State and local governments.

INSTITUTIONS OF HIGHER EDUCATION--universities and colleges.

LOCAL PUBLIC SCHOOL SYSTEMS--an administrative unit at the local level which exists primarily to operate schools or to contract for school services. These units may or may not be coterminous with county, city, or town boundaries.

STATE AUTHORITY, STATE EDUCATION AGENCY, MUNICIPAL AUTHORITY, AND OTHER LICENSED AGENCIES--State boards of education or State authorities and commissions set up by acts of legislation specifically for operating public stations and networks. Also included are the one municipal authority established by the city of New York and the two nondomestic licensees, the departments of education in American Samoa and Puerto Rico.

1/ The types of public television licensees are based on the CPB-USOE classification; the geographic regions in the aggregate United States are based on the USOE classification. See Financial Statistics of Noncommercial Television License Holders: Fiscal Year 1970, Corporation for Public Broadcasting, Washington: 1971, pp. 1-2, or revised edition, DHEW Publication No. (OE) 72-67, U. S. Government Printing Office, Washington: 1972, pp. 1-2. Adjusted budget size is also employed as an analytic variable because (a) the sizes have a considerable influence on the broadcast and production characteristics of the stations and licensees, and (b) these five adjusted budget sizes have been adopted as the basis for Community Service Grant allocation for the licensees by the Corporation for Public Broadcasting. See Employment Statistics of Public Television Licensees: June 30, 1970, (advance edition), Corporation for Public Broadcasting-U.S. Office of Education, U. S. Governmemt Printing Office, Washington: 1972, p. 4.

For the aggregate United States, there were five geographic groupings:

North Atlantic	Great Lakes and Plains	Southeast
Connecticut	Illinois	Alabama
Delaware*	Indiana	Arkansas
District of Columbia	Iowa	Florida
Maine	Kansas	Georgia
Maryland	Michigan	Kentucky
Massachusetts	Minnesota	Louisiana
New Hampshire	Missouri	Mississippi
New Jersey	Nebraska	North Carolina
New York	North Dakota	South Carolina
Pennsylvania	Ohio	Tennessee
Rhode Island	South Dakota	Virginia
Vermont	Wisconsin	West Virginia

West and Southwest	Outlying Areas
Alaska*	American Samoa
Arizona	Canal Zone*
California	Guam
Colorado	Puerto Rico
Hawaii	Trust Territory of the Pacific Islands*
Idaho	Virgin Islands of the U.S.*
Montana*	
Nevada	
New Mexico	
Oklahoma	
Oregon	
Texas	
Utah	
Washington	
Wyoming	

---

* No public television licensee as of June 30, 1971.

The budgets of the stations fall into five categories:

Less than $100,000
$100,000 - $249,999
$250,000 - $699,999
$700,000 - $1,999,999
$2,000,000 and over

The following terms and organizations are encountered in this report:

ADJUSTED BUDGET SIZE--Total operating expenses plus amount of institutional support.

BROADCAST HOURS--Hours broadcast by public television stations during Fiscal Year 1971.

CHILDREN'S TELEVISION WORKSHOP (CTW)--An independent, nonprofit corporation in New York, which produces children's programs, such as "Sesame Street" and "The Electric Company."

EDUCATIONAL TELEVISION SERVICE/PROGRAM SERVICE (ETS/PS)--A nonprofit organization in Bloomington, Ind., whose main function is to distribute television materials. (As of July 1, 1971, called Public Television Library (PTL).)

GREAT PLAINS NATIONAL INSTRUCTIONAL TELEVISION LIBRARY (GPNITL)--A nonprofit organization of the University of Nebraska in Lincoln, Nebraska, which develops and distributes videotaped instructional television courses to educational institutions and interested agencies.

NATIONAL ASSOCIATION OF EDUCATIONAL BROADCASTERS (NAEB)-- A professionally staffed organization designed to help educational telecommunicators function.

NATIONAL EDUCATION TELEVISION (NET)--A division of WNET, New York, the major national production center for evening programming for public television.

NATIONAL INSTRUCTIONAL TELEVISION CENTER (NITC)--A nonprofit organization of the Indiana University Foundation in Bloomington, Ind., whose major function is to develop and distribute educational television materials.

NATIONAL INTERCONNECTION--Broadcast interconnection system for national delivery of programs. Current administering agency is Public Broadcasting Service (PBS).

OTHER INTERCONNECTION--Broadcast interconnection systems other than those listed above (e. g., private interconnections and State interconnections of independent stations).

PRODUCTION HOURS--Hours of programs produced locally by public television licensees during Fiscal Year 1971.

PROGRAMMING FOR CLASSROOM--Programming intended for classroom audiences, inservice training, college credits, etc. (sometimes known as programming for instructional television (ITV).)

PROGRAMMING FOR GENERAL AUDIENCE--All programming other than programming for classroom.

PUBLIC BROADCASTING SERVICE (PBS)--A nonprofit corporation in Washington, D. C., which manages the public television network; responsible for selecting, scheduling, and promoting programs distributed nationally.

PUBLIC TELEVISION STATION--A station which is 1) publicly owned (by a local community or municipality, State agency, school system or college, or public corporation); and 2) subsidized (by State or local taxes or foundation grants). It is eligible for support from CPB and Federal facility grants.

REGIONAL INTERCONNECTION--Broadcast interconnection systems for regional delivery of programs, e.g.:

Central Educational Network (CEN) (Chicago, Illinois)
Eastern Educational Television Network (EEN) (Newton Upper Falls, Massachusetts)
Eastern Public Radio Network (EPRN) (Albany, New York)
Midwestern Educational Television, Inc. (MET) (St. Paul, Minnesota)
Rocky Mountain Corporation for Public Broadcasting (RMCPB) (Albuquerque, New Mexico)
Southern Educational Communications Association (SECA) (Columbia, South Carolina)
Western Educational Network (WEN) (Spokane, Washington)

SCHOOL-IN-SESSION--The period of the fiscal year when local schools are in session.

SCHOOL-NOT-IN-SESSION--The period of the fiscal year when local schools are closed for vacations.

SOURCE OF PROGRAMMING--Origin of program delivery, such as programs locally produced, national interconnection.

TYPE OF PRODUCTION--Programs locally produced either live, on tape, or on film.

TYPE OF PROGRAMMING--Programming which is: (a) programming for classroom, or (b) programming for general audience.

SUMMARY OF THE RESULTS

PUBLIC TELEVISION LICENSEES AND STATIONS

A total of 126 public television licensees operated 193 stations which were on the air during the entire Fiscal Year 1971 in the aggregate United States. Most of the licensees operated one or two stations; some, especially licensees among State/municipal authorities, operated a number of satellite stations. State/municipal authorities, although comprising the smallest category of licensees (18), operated the largest number of stations (60). Community organizations held 44 licenses and operated 52 stations, while institutions of higher education had 42 licenses and 58 stations. Local public school systems, with 22 licenses, maintained 23 stations. (See table 1.)

Licensees among community organizations were largely concentrated in the North Atlantic and the Great Lakes and Plains regions. The Southeast and the West and Southwest regions dominated in number of licensees among local public school systems. The Southeast region accommodated more licensees of State/municipal authorities than any other region in the aggregate United States. The two licenses in the Outlying Areas were granted to State/municipal authorities. (See table 1.)

The most common adjusted budget size of public television licensees was $250,000 - $699,999 (59), followed by $700,000 - $1,999,999 (35), $100,000 - $249,999 (15), $2,000,000 and over (11), and under $100.000 (6). Licensees of State/municipal authorities and community organizations were relatively large in adjusted budget size. (See tables 2 and 3.)

TOTAL BROADCAST HOURS

During FY 1971, 193 public television stations reported a total of 639,611 broadcast hours in the aggregate United States, a 9-percent increase over the broadcast hours of FY 1970, when 185 stations broadcast 586,718 hours. The increase in the number of total broadcast hours appears largely due to the increase in the number of stations in FY 1971 over that in FY 1970. The annual mean broadcast hours per station also increased slightly during the period (3,171 hours in FY 1970 and 3,314 hours in FY 1971). Broadcast hours for both programming for classroom and programming for general audience went up slightly from FY 1970 to FY 1971. (See figure 1 and table 4.)

During FY 1971, of the total broadcast hours, 35.4 percent was transmitted for classroom use and 64.6 percent for general audiences. State/municipal authorities reported more broadcast hours than any other type of licensee. Institutions of higher education tended to broadcast proportionately more programming for general audience, while local public school systems broadcast

relatively more programming for classroom. Programming for classroom was on the air primarily when local schools were reported to be in session. Of the total broadcast hours during the school-in-session period, 43 percent was devoted to programming for classroom, while slightly less than 5 percent of the total broadcast hours during the school-not-in-session period was programmed for classroom. Programming for general audience was broadcast evenly all year round. These tendencies held among all types of licensees, geographic regions, and adjusted budget sizes. (See figures 2 through 4, tables 5 through 7, and detailed tables A-1 through A-18.)

WEEKLY BROADCAST HOURS BY DAY OF WEEK

The weekly broadcasting schedule of public television stations differed widely for the in- and out-of-school sessions. In FY 1971, the mean number of broadcast weeks of public television stations for the school-in-session period was 35, while that for the school-not-in-session period was 16. (See detailed tables A-19 through A-24.)

During the school-in-session period, mean broadcast hours varied considerably according to the day of the week, with public television stations on the air longer during weekdays (Monday through Friday) than during weekends (Saturday and Sunday). This arose from the uneven weekday and weekend schedule of programming for classroom (e.g., 6.5 hours per weekday and 2.7 and 2.0 hours for Saturday and Sunday, respectively). Stations licensed to local public school systems transmitted no classroom programming during the weekends. (See table 8 and tables 10 and 11.)

Mean daily broadcast hours of the stations varied less when local schools were not in session than when they were in session. This was due to the even schedule for programming for classroom. Only 48 out of the total 193 public television stations broadcast programming for classroom during the school-not-in-session period. For programming for general audience, there was no significant change in mean broadcast hours during the in- or out-of-school sessions. Nine television stations did not broadcast any programs when local schools were not in session. (See tables 9, 11, 12, and 13.)

BROADCAST HOURS BY SOURCE OF PROGRAMMING

During FY 1971, national interconnection was the largest single source of programming (27.5 percent of the total) of public television, while programs locally produced slipped from the largest (during FY 1970) to

the second largest source of programming (23.0 percent). Locally produced programs still constituted the largest single source of public television programming for classroom, even though this source experienced a sizable decrease in terms of the percent of the total broadcast hours delivered (44.2 percent in FY 1970 and 35.9 percent in FY 1971). The National Instructional Television Center (NITC) was the next largest source of programming during FY 1971 with 10.6 percent of the total, followed by national interconnection, with 6.9 percent of the total. For programming for general audience, national interconnection delivered the largest proportion (38.8 percent) of the total broadcast hours during FY 1971, followed by locally produced programs (16.0 percent) and National Educational Television (NET) (9.7 percent). (See figure 5 and table 14.)

As a source of programming for classroom, local public school systems and State/municipal authorities relied more heavily on locally produced programs (46.3 percent and 42.8 percent, respectively). For programming for general audience, all types of licensees used national interconnection most frequently, followed by locally produced programs. (See tables 15 through 17.)

Among geographic regions in the United States, the Southeast utilized more locally produced programs (30.4 percent) than any other region, while in the North Atlantic region only 14.4 percent of the total broadcast hours was delivered through locally produced programs. With the exception of Outlying Areas, national interconnection was heavily utilized by licensees in all regions; this was especially true in the case of programming for general audience. (See tables 18 through 20.)

It became apparent for adjusted budget size that the larger the budget size, the more hours of locally produced programs were used as a source of programming. Among smaller budget sizes (under $100,000 - $249,999) interconnections, including national interconnection, were heavily utilized for general audience programs. (See tables 21 through 23.)

PRODUCTION HOURS

Total production hours (hours of programs produced locally by public television licensees) decreased by 11.7 percent from FY 1970 to FY 1971 (41,936 hours in FY 1970 and 37,050 hours in FY 1971). This was due to the sizable decrease in production hours for programming for classroom (a 42.8-percent decrease) during the period, while the production hours for general audience went up 10 percent. In addition, the production hours made in color went up 26.7 percent during the same period, as indicated by data carried in table 24.

Most of the locally produced programs delivered during FY 1971 were on tape (63.6 percent of the total); live programs (33.6 percent) and programs on film (only 2.8 percent) made up the remainder. Most locally produced programs (63.6 percent of the total) were made in black and white. This was especially true when programs were taped or live, as more than 60 percent of the totals of each of these categories was produced in black and white. However, 67.7 percent of the filmed productions was made in color. (See figure 5 and table 24.)

Community organizations produced more programs in color (55.8 percent of the total) than in black and white; however, State/municipal authorities and local public school systems made more black-and-white than color programs (80.7 percent and 75.2 percent, respectively). Community organizations produced the largest number of film productions. Among geographic regions, the Southeast was the biggest producer of programs; however, most of these programs were made in black and white. On the other hand, the North Atlantic region produced a relatively modest number of hours of programs, but more than half of these programs were in color. The West and Southwest region also produced more color than black-and-white programs. In terms of adjusted budget size, there was a general tendency that the larger the licensee, the more programs were made in color. This was especially true among the licensees of $2,000,000 and over, where the live and film productions were almost entirely in color. (See tables 25 through 33, which detail the number of production hours licensees devoted to color and black-and-white productions, by significant variables.)

APPENDIX A

SURVEYS OF PUBLIC TELEVISION LICENSEES

I. History and general descriptions of surveys of public television licensees: 1969 - 1971

In July of 1969, the Corporation for Public Broadcasting (CPB), aware of the need for valid statistics and information concerning its constituents' broadcasting operations, made a grant to the National Association of Educational Broadcasters (NAEB) to develop and implement a management information system.

In order to develop an appropriate survey instrument, various survey forms were examined and selected key people within the broadcasting industry and selected station personnel were interviewed. The findings from these activities aided the design of the FY 1969 survey instrument.

The FY 1969 survey of public television licensees (the first comprehensive survey of this kind) was launched at the beginning of 1970. The survey instruments were forwarded to the 124 known public television licensees, and 120 questionnaires were returned. Due to failures in basic recordkeeping on the part of some licensees and possible ambiguities of the questions in the survey instrument, some data could not be obtained from certain stations, and these categories were dropped for all licensees and not included in the computer files. In July of 1970 the information project was moved under the direct administration of the CPB and work was completed on establishing computer files of selected data gathered by the FY 1969 survey.

The survey instrument was further revised and refined in keeping with experience gained through the 1969 survey for the FY 1970 survey (e.g., clarification of ambiguities in the previous survey instrument). For the FY 1970 survey the CPB received 136 responses out of 137 licensees contacted.

The contents of the FY 1971 survey instrument were basically the same as the ones of the previous year; however, the survey was conducted in two parts: Part I was intended to collect information on quantitative data which vary on a fiscal year basis, such as financial, broadcast schedule, and employment data; Part II was designed to obtain information on far less changing or static data, such as listings of management personnel, station facilities, and studio equipment. The Part II instrument consisted of listings of computer records of these static data of the previous year and required only corrections to update the information. Out of 142 licensees contacted, all responded for the FY 1971 survey.

II. Processing procedures and list of computer files for public television licensees

Raw data from the survey questionnaires were manually edited and corrected for obvious errors. Followup procedures were initiated with licensees to enable necessary corrections to be made. Verified information was then entered into the computer files and checked again to insure accuracy.

The Corporation has constantly redesigned and improved its management information computer files, primarily through time-sharing software and remote-access retrieval techniques.

The following is a list of the computer files developed from the data obtained through the annual surveys for the public television licensees:

1. Financial file -- Financial data

2. Employee file -- Employee data

3. Station file -- Station and transmission facilities and broadcast data

4. Studio file -- Studio facilities and production data

5. Personnel file -- list of names and addresses of management personnel

APPENDIX B

COMPUTATIONS OF BROADCAST HOURS

(A) Mean weekly broadcast hours for weeks broadcast

$$WBH = \frac{\sum_{i=1}^{n} X_i}{N}$$

Where
- WBH = Mean weekly broadcast hours.
- X_i = Weekly broadcast hours of i^{th} station.
- N = Number of broadcast stations.

(B) Broadcast hours during school-in-session

$$BH_1 = \sum_{i=1}^{n} f_i X_i$$

Where
- BH_1 = Broadcast hours during school-in-session.
- f_i = Number of broadcast weeks of the i^{th} station during school-in-session.
- X_i = Weekly broadcast hours of the i^{th} station during school-in-session.

(C) Broadcast hours during school-not-in-session

$$BH_2 = \sum_{i=1}^{n} f_i' Y_i$$

Where
- BH_2 = Broadcast hours during school-not-in-session.
- f_i' = Number of broadcast weeks of the i^{th} station during school-not-in-session.
- Y_i = Weekly broadcast hours of the i^{th} station during school-not-in-session.

(D) Broadcast hours for programming for classroom

$$BH_{pc} = \sum_{i=1}^{n} (f_i X_i + f_i' X_i')$$

Where

BH_{pc} = Broadcast hours for programming for classroom.
f_i = Number of broadcast weeks of the i^{th} station during school-in-session.
X_i = Weekly broadcast hours of the i^{th} station for programming for classroom during school-in-seesion.
f_i' = Number of broadcast weeks of the i^{th} station during school-not-in-session.
X_i' = Weekly broadcast hours of the i^{th} station for programming for classroom during school-not-in-session.

(E) Broadcast hours for programming for general audience

$$BH_{pga} = \sum_{i=1}^{n} (f_i Y_i + f_i' Y_i')$$

Where

BH_{pga} = Broadcast hours for programming for general audience.
f_i = Number of broadcast weeks of the i^{th} station during school-in-session.
Y_i = Weekly broadcast hours of the i^{th} station for programming for general audience.
f_i' = Number of broadcast weeks of the i^{th} station during school-not-in-session.
Y_i' = Weekly broadcast hours of the i^{th} station for programming for general audience during school-not-in-session.

(F) Total (all-year) broadcast hours

$$TBH = BH_1 + BH_2 = BH_{pc} + BH_{pga}$$

Where

TBH = Total (all-year) broadcast hours

(G) Broadcast hours by source of programming

Percent distributions of broadcast hours by source of programming were computed as follows:

i. Percent of all categories of source of programming were converted to broadcast hours for both programming for classroom and programming for general audience for each station.

ii. Total broadcast hours of each category of source of programming were calculated by adding those of the stations involved.

iii. Finally, percent distributions of broadcast hours by source of programming were made for both programming for classroom and programming for general audience by converting the broadcast hours of each category to percent of the total.

APPENDIX C

QUESTIONNAIRE ITEMS

Data in this report derive from the following items which were included in the survey of public television licensees, fiscal year 1971, conducted by the Corporation for Public Broadcasting.

I. BROADCAST HOURS

Please prepare a separate page for each station scheduled separately.
(Only one page need be prepared for multiple stations scheduled simultaneously.)

1. What are the call letters of stations reported on this page? _____

2. Please fill in the average hours broadcast for each of the following:

A. During the period of the year when local schools are in-session:
(How many weeks out of the year does this period cover? _____)

	Mon.	Tue.	Wed.	Thu.	Fri.	Sat.	Sun.	Weekly totals
Programming for classroom (ITV) (Instructional for classroom use, in-service training, college credits, etc.)								
Programming for general audience (All other programming)								
Total daily hours when schools are in-session								

B. During the period when local schools are not-in-session:
(How many weeks out of the year does this period cover? _____
Please give inclusive dates _____)

	Mon.	Tue.	Wed.	Thu.	Fri.	Sat.	Sun.	Weekly totals
Programming for classroom (ITV) (Instructional for classroom use, in-service training, college credits, etc.)								
Programming for general audience (All other programming)								
Total daily hours when schools are not-in-session								

C. Total weeks operated during the year ending June 30, 1971 _____.

BROADCAST HOURS (Continued)

3. Of the total hours broadcast by your station or network of stations during the year, please estimate (as a percent) the sources of programming:

	Programming for classroom %	Programming for general audience %
Programs locally produced		
National interconnection		
Regional interconnection		
*Other interconnection		
Film and tape from National Educational Television		
Film and tape from regional networks		
Film and tape from Educational Television Service/Program Service		
Film and tape from Children's Television Workshop		
Film and tape from National Instructional Television Center		
Film and tape from Great Plains National Instructional Television Library		
Film and tape from other public television stations		
Film and tape from commercial syndicates		
Film and tape from all others		
Total	100%	100%

*For example, interconnections such as the State University of New York system, Pennsylvania Public TV Network, and other state and local interconnections of independent stations. Programs originating from the PBS network, although carried by SUNY, PPTN, etc., should be reported under "National interconnection."

This category does not include multiple-station relay transmitters under the same license which are simultaneously programmed - such as Alabama, Kentucky, New Hampshire, etc.

II. HOURS OF PROGRAMS PRODUCED LOCALLY

Please estimate the number of hours of programming which were produced (not broadcast hours) at your studios and facilities during the year ending 6/30/71: (Do not include productions used exclusively in closed circuit operations.)

	Hours color	Hours black and white
Programming for classroom		
Tape	_____	_____
Film	_____	_____
Live	_____	_____
Total hours produced for programming for classroom	_____	_____

	Hours color	Hours black and white
Programming for general audience		
Tape	_____	_____
Film	_____	_____
Live	_____	_____
Total hours produced for programming for general audience	_____	_____
